## MAT 335E Programming Algorithms

Lab-4 / CRN: 10611

Instructor: Assoc. Prof. Dr. Burcu Tunga Lab Assistant: Res. Asst. Ahmet Topal

## 1 Question 1

```
Employee

- essn : String
- pricebyHour : double
- workingYear : int
- isRetired : boolean

+ Employee( essn:String, workingYear:int, pricebyHour:double, isRetired:boolean)
+ getWorkingYear() : int
+ getIsRetired() : boolean
+ setIsRetired(isRetired : boolean) : void
+ setWorkingYear(workingYear : int) : void
+ deserveBonus() : boolean
+ calculateSalary(workingHour : int, workingDays : int) : double
+ Retiring(): void
```

Figure 1: UML Class Diagram of Employee

UML diagram and method description of Employee class are given below. Write a source code of the given class.

- deserveBonus(): In order to deserve bonus, the employee must have worked 10 years or more and must not retire.
- calculateSalary(): Multiplying the total working hours by the hourly wage. (Daily working hours are the same for each day.)
- Retiring(): Employees with a working year of 20 or more must be retired. This method must be triggered by setWorkingYear.

Write a source code of TestEmployee class which includes main method. You must make the followings in main method.

- Create an object so that the members working Year and isRetired are 14 and False, respectively. Other parameters (essn, priceby Hour) can be determined by you.
- Use deserveBonus and calculateSalary method for this object.
- Use the setWorkingYear method to set the working year to 21.
- Control the value of isRetired instance variable.

## 2 Question 2

Write a source code of class Clip taking into account the following steps:

- Members that store bullet capacity of the clip and the current number of bullets in clip.
- A constructor that takes those members as parameters.
- A method for firing a bullet from the clip.
- A method for filling the clip.

Write a source code of class **TestClip** that includes main method. You must make the followings in main method:

- Create an object from Clip Class.
- Use firing and filling method for this object.
- Print current bullet numbers of clip to the screen at the end of firing.
